

Albert Campbell Collegiate Institute

IDEAS PROGRAM

(**I**nnovating and **D**esigning using
Engineering and **A**rchitectural **S**kills)

The special-focused **IDEAS** Program (Innovating and Designing using Engineering and Architectural Skills) is a part of TDSB's **Centres of Innovation for Skills and Technologies**. Albert Campbell already offers a wide range of courses honouring all pathways; however, enrolment in the **IDEAS** program will lead to the Ontario Secondary School Diploma and to an increased awareness of, and readiness to compete, in the ever-changing world of innovation, creativity, adaptability and technological proficiency. Students will earn credits and develop skills that are valued by industry sectors and post-secondary institutions. For example, students will learn to use various technologies to collaborate with others to plan and develop projects; lead others to discover and develop new initiatives; communicate effectively to articulate a vision, describe and market concepts and to problem-solve; formulate solutions involving expected and unexpected challenges. Successful completion of the **IDEAS** program will be noted with career-relevant training and a certificate of completion. Students will also have the opportunity to include the Specialist High Skills Major (SHSM) component by participating in co-op for out of school experiential and practical, hands-on learning.
