Engineering and Mathematics!

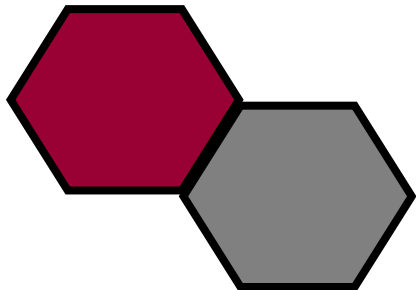

Program Description

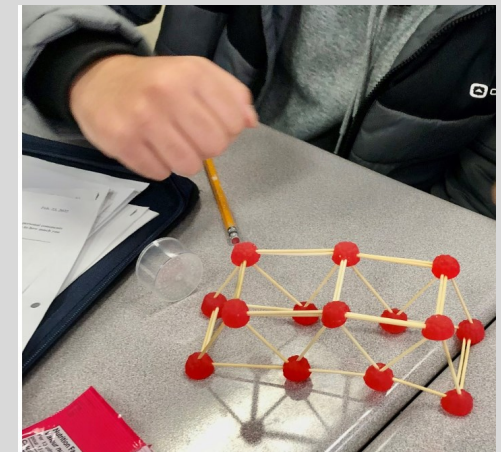

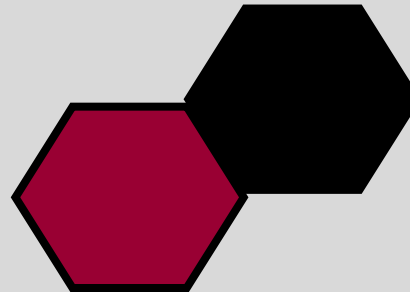

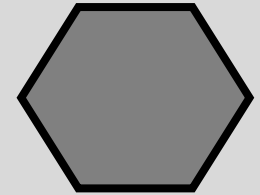

The A+STEM program is designed for grade 9 and 10 students that are interested in careers involving science, technology, engineering and mathematics. Students accepted to this program will have the opportunity to take specific courses with their A+STEM peers (all courses are offered at the regular academic level).

George S. Henry Academy has fostered relationships with a variety of community partners that provide A+STEM students with fun workshops and activity days designed to give students first hand experience of engineering and math ideas at work.

Space in this program is limited to 27 grade 9 students, and 30 grade 10 students. To become part of this program, students must complete an application form. The application form is available on the school website, and from the Student Services Office.
